

## **Soluteo platform now available via wireless local networks**

**June 1, 2005** - Soluteo, specialist in BlackBerry® based mobile solutions, is pleased to announce that all of its products are now available on the new 7270 terminals which operate exclusively via wireless local area networks (WLANs).

Featuring the same advantages as traditional platforms – security, stability, ease of deployment and utilization – the BlackBerry® WLAN technology is based on version 4.0 of the business server, efficiently integrating voice and data. BlackBerry 7270™ terminals mainly allow users access to email, wireless business applications and IP telephony, without the necessity of a GPRS operator link.

“This new approach will allow greater use of the BlackBerry® in enterprises that need mobility within the workplace,” explains Sigisbert Ratier, Soluteo’s Director. “Examples would be warehouse management, building maintenance and the monitoring of certain procedures in the hotel industry.”

The principal advantage for companies in choosing a BlackBerry® WLAN solution is clearly in the low long-term usage costs (since this solution is completely independent of GPRS networks). Concludes Mr. Ratier, “With the new BlackBerry® WLAN technology, Soluteo can help customers maximize their return on IT investment by developing solutions that capitalize on existing wireless local area networks.”

### **About Soluteo**

Leader in the development of BlackBerry® based mobile solutions, Soluteo is one of the few enterprises in Europe that is ISV (Independent Solution Vendor) accredited by Research In Motion. Based in the UK, France and Canada, Soluteo specializes in real-time mobile extensions for existing enterprise software applications. Soluteo’s vertical markets include: Market Research, Field Force Automation, Transport, Real Estate Management, CRM and Data Acquisition.
